Aerial Photography Service

Low level, cost effective and efficient - Pay for the photos - not the plane hire!

Deakin University, Warrnambool Campus

Our specialty service includes:

- > High detailed wide angle perspectives of properties – not a zoomed in photograph from afar. Close proximity to subject with wide angle background detail.
- > Unique angles and altitudes obtainable. Balloon photography is not restricted to just one angle or altitude. The balloon can be walked and maneuvered to capture the exact image required.
- > If desired, you or your company representative can attend on site and view/ direct the photographer from the comfort of our viewing station to capture the exact image you have in mind.
- > Heights from ground level up. The best photographs are generally obtained from between 50ft and 200ft, this is 1/5th the altitude of aeroplanes and helicopters.
- > Up to 100 photographs delivered on CD. Digital images delivered on the spot if required and prints/enhanced images (additional service if required) delivered by express post the next day.
- > The more properties booked, the more cost effective our service
- > Professional Service with minimum fuss - our balloon arrives inflated, photography system is then attached and up it goes within minutes.
- > Highest quality professional photographic equipment is utilized. Images can be used for brochures, websites, posters, prints.
- > GIS or Surveying clients can obtain GPS information with photograph as an additional service
